PROFESSIONAL SUMMARY

Mobile Systems Architect and Technical Product Engineer with 4+ years of experience designing and delivering connected vehicle and mobile platform solutions. Proven track record of leading cross-functional initiatives across mobile, backend, and hardware systems, including Digital Key platforms for OEM partners. Experienced in system architecture, technical requirements, validation strategy, SDK integration, and stakeholder alignment. Skilled in iOS development (Swift, SwiftUI, UIKit), backend integration (Node.js, REST APIs, PostgreSQL), connected systems (BLE, NFC, telematics), and customer-facing technical leadership.

CORE SKILLS

Mobile Development	Swift, SwiftUI, UIKit, iOS Architecture, SDK Integration, API Consumption
Backend & Cloud	Node.js, Express.js, REST APIs, PostgreSQL, Authentication Flows, Environment Configuration
Connected Systems	BLE, NFC, Digital Key, Telematics, Vehicle Access Systems, Backend-vehicle Integration
Leadership & Delivery	System Design, Technical Specifications, Jira, Agile/Scrum, TestRail, Unit Testing, UI Testing

PROFESSIONAL EXPERIENCE

DENSO International North America

Mobile Systems Engineer / Technical Product Engineer | February 2021 - Present

- Led technical definition and system design for connected vehicle mobile applications spanning Digital Key, authentication, fleet leasing, and vehicle data workflows across mobile, backend, and hardware components.
- Authored functional requirements, behavioral specs, and system flows used by internal teams and external vendors to implement scalable mobile and vehicle interaction features.
- Defined end-to-end mobile architecture for vehicle leasing and access workflows, including OTP-based authentication, token persistence, BLE-based communication, and backend data integration.
- Collaborated with backend, hardware, QA, and business teams to align API contracts, user flows, assumptions, and production-ready behavior for mobile and vehicle systems.
- Supported Toyota Digital Key Gen 1 (21MM) by contributing to integration, troubleshooting, validation, and readiness of mobile-to-vehicle communication workflows.
- Owned requirements and specifications for Toyota's next-generation Digital Key effort (Gen 1 Alpha), partnering with Toyota management and cross-functional stakeholders to define architecture, integration strategy, and expected system behavior.
- Served as Subject Matter Expert for Digital Key solutions during live demos and customer-facing technical sessions, answering architecture and integration questions from enterprise prospects including Stellantis and AT&T.
- Translated complex technical concepts - including BLE/NFC communication, vehicle interaction flows, and backend dependencies - into clear explanations for business stakeholders, customers, and partner teams.
- Built requirement-to-test traceability and validation frameworks using TestRail, helping ensure coverage across vehicle, dashboard, and mobile application behavior.
- Supported release readiness and mobile distribution workflows through TestFlight, Firebase App Distribution, and platform compliance updates, while coordinating work through Jira-based delivery processes.

SELECTED PROJECTS

Toyota Digital Key Platform (Gen 1 - 21MM / Gen 1 Alpha)

- Contributed to implementation and validation of secure mobile-based vehicle access using BLE/NFC communication for OEM Digital Key initiatives.
- Defined requirements and technical flows for next-generation Digital Key architecture, including access control, vehicle interaction states, and backend coordination.
- Worked directly with Toyota stakeholders, backend teams, and hardware engineers to align integration strategy and expected product behavior.

MobiQ / CMP Fleet Management Platform

- Designed workflows for user sign-in, vehicle selection, leasing, driver assignment, and BLE-based vehicle interaction across mobile and backend systems.

- Defined requirements for dashboard and mobile experiences that surface vehicle status, location, battery/fuel, mileage, and assignment data.
- Supported validation strategy across vehicle, dashboard, and app functionality through structured requirements, flows, and test coverage.

Asset Management Platform - Full-Stack Personal Project

- Designed and developed a SwiftUI iOS client and Node.js/Express backend for an asset management system with PostgreSQL-backed persistence.
- Implemented API-driven workflows, environment-based configuration, and local/cloud-ready execution to support reliable development and future deployment scaling.
- Used the project to deepen hands-on experience with backend integration, authentication patterns, and end-to-end mobile plus cloud system design.

PREVIOUS EXPERIENCE

Lambda School

iOS Section Leader | *January 2020 - November 2020*

- Led iOS student cohorts by reviewing projects, guiding implementation decisions, and reinforcing best practices in Swift, UIKit, and mobile architecture.
- Collaborated with instructors and section leaders to improve curriculum delivery and support better technical outcomes for students.
